

Advancing Renewable Energy in Zanzibar – *Pioneering Steps with the President and Technology Partners*

In an inspiring move toward a sustainable future, our team, alongside esteemed technology partners, recently held a significant meeting with the President of Zanzibar to advance the development of the 120MW wind farm project. This project marks a major milestone in Zanzibar’s journey toward harnessing renewable energy sources and reducing reliance on fossil fuels.

Strategic Discussions and Shared Vision

During the meeting, the President expressed enthusiastic support for the wind farm initiative, underscoring its alignment with Zanzibar’s commitment to sustainable energy and environmental stewardship. Together, we explored the transformative impact this project will have on the local energy infrastructure, promoting both economic growth and energy independence for the island.

Our Commitment to Technological Excellence

Pioneering a Sustainable Future: *Empowering Zanzibar with Clean Energy and Economic Growth*

Our dedicated team, alongside top-tier technology partners, brings exceptional expertise to Zanzibar’s 120MW wind farm project. Through detailed planning and the latest advancements in wind energy, we’re creating a project that sets a new standard for renewable energy in East Africa. This wind farm is designed not only to harness clean, sustainable power but to support long-term economic growth for the people and businesses of Zanzibar. With a carefully considered layout that respects the natural landscape, we’re focused on ensuring maximum efficiency and minimal environmental impact. Advanced monitoring systems will keep operations running smoothly, while local communities benefit from a reliable, sustainable energy source that reduces dependency on traditional fuels. This project underscores our commitment to Zanzibar’s energy future and to a brighter, greener tomorrow.

This meeting has paved the way for the project's next stages, including advanced feasibility studies, infrastructure planning, and community engagement. With a 25-year Power Purchase Agreement (PPA) officially endorsed by the President, the project has strong backing from both the Office of the President and the Zanzibar Ministry of Water, Energy, and Minerals. Present at the meeting were Hon. Shaib Kaduara, Minister of Water, Energy, and Minerals, along with other high-ranking government officials, whose involvement underscores the government’s dedication to the success of this venture. As we move forward, we remain committed to transparency, environmental responsibility, and collaboration with local stakeholders to maximize the project’s success.

Picture Caption: Our Group Managing Director, alongside Regional Senior Management from our technology partner, outlines the comprehensive implementation strategies for the 120MW wind farm project. Together, they detail a phased approach to construction, integration of advanced wind technology, and a shared commitment to sustainability. Emphasizing collaboration with local stakeholders and adherence to international standards, they highlight the project’s role in building a resilient energy infrastructure that will provide lasting benefits to the communities of Zanzibar.

*We are grateful to the President, the MoWEM led by Minister of Water, Energy and Minerals and all our partners for their unwavering support and collaboration in this venture. Together, we are not only investing in Zanzibar’s energy future but also setting a precedent for sustainable development across the region.*
